Laser Engraving on Ply-board 鐳射雕刻夾層纖維片

金屬雕刻/蝕刻 METAL ETCHING/ENGRAVING

曬蝕法是金屬蝕刻最常用的方法，圖像部份經化學液體溶解凹入，更可以油彩填充著色；鐳射雕刻，則可在金屬表面，以高能量鐳射光束刻上小洞穴，構成精確圖像，但不能著色，皆可用以製作木盾及金屬證書。

Photogravure has long been the most popular method in making depressed image on metal surface. Paint may be applied to fill up the depressed area for reproducing multi-color graphic on brass or stainless steel sheet. An optional method is laser engraving. With the high powered laser beam, small recessed graves are formed and these graves together produce a dotted image on the metal plate. The image produced by this method may be extremely delicate but no color can be added on to it. Metal engraving can also be applied to the making of shield or metal certificate.
